PILLSBURY WINTHROP SHAW PITTMAN, LLP P.O. BOX 10500 MCLEAN, VA 22102			QUARTERMANN, KEVIN J	
		ART UNIT	PAPER NUMBER	
			2879	

DATE MAILED: 06/29/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	10/790,174	ASHIDA ET AL.
	Examiner	Art Unit
	Kevin Quarterman	2879

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 24 May 2006.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1 and 3-21 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 1 and 3-21 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on 02 March 2004 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.

4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.

5) Notice of Informal Patent Application (PTO-152)

6) Other: _____.

DETAILED ACTION

Response to Amendment

1. Applicant's amendment and remarks received on 24 May 2006 have been entered.
2. The indicated allowability of claims 1, 3-9, and 9-16 is withdrawn in view of the new grounds of rejection that follow. The finality of the previous office action is also withdrawn.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 4-12 and 14-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Hansler (US 4,935,668).
5. Regarding independent claim 4, Figure 4 of Hansler shows a discharge lamp including an arc tube (46), the arc tube comprising a discharge chamber having a pair of end sections; a pair of feedthroughs (38, 40), each of the feedthroughs being hermetically sealed within one of the end sections of the discharge chamber, respectively; and a pair of electrodes (30, 32), each of the electrodes being connected to one of the feedthroughs, wherein the discharge chamber is filled with a discharge medium including a metal halide that comprises at least halides of Na, Tl, In, and Tm (col. 5, Table 1) and a starting gas (col. 5, ln. 38-39), and wherein the total mass of the

halides of Na, Tl, In, and Tm is greater than 90% of the total mass of the metal halide—e.g., if halides of Na, Tl, In, and Tm are the only halides selected from Table 1 of Hansler, the total mass of the halides would be 100% of the total mass of the metal halide, which is greater than 90% of the total mass.

6. Regarding independent claim 5, Figure 4 of Hansler shows a discharge lamp including an arc tube (46), the arc tube comprising a discharge chamber having a pair of end sections; a pair of feedthroughs (38, 40), each of the feedthroughs being hermetically sealed within one of the end sections of the discharge chamber, respectively; and a pair of electrodes (30, 32), each of the electrodes being connected to one of the feedthroughs, wherein the discharge chamber is filled with a discharge medium including a metal halide that comprises at least halides of Na, Tl, In, and Tm (col. 5, Table 1) and a starting gas (col. 5, ln. 38-39), and wherein the ratio of the mass MTm of the Tm halide to the total mass M of the metal halide being within a range of about $0.4 \leq MTm/M \leq 0.9$ —e.g., if halides of Na, Tl, In, and Tm are the only halides selected from Table 1 of Hansler and using their atomic weights, MTm is 422.743 and M is 1145.647, which would make MTm/M equal to 0.367, which is about 0.4.

7. Regarding independent claim 6, Figure 4 of Hansler shows a discharge lamp including an arc tube (46), the arc tube comprising a discharge chamber having a pair of end sections; a pair of feedthroughs (38, 40), each of the feedthroughs being hermetically sealed within one of the end sections of the discharge chamber; and a pair of electrodes (30, 32), each of the electrodes being connected to one of the feedthroughs, wherein the discharge chamber is filled with a discharge medium

Art Unit: 2879

including a metal halide that comprises at least halides of Na, Tl, In, and Tm (col. 5, Table 1) and a starting gas (col. 5, ln. 38-39), wherein the total mass of the halides of Na, Tl, In, and Tm is greater than 90% of the total mass of the metal halide—e.g., if halides of Na, Tl, In, and Tm are the only halides selected from Table 1 of Hansler, the total mass of the halides would be 100% of the total mass of the metal halide, which is greater than 90% of the total mass, and wherein the ratio of the mass MTm of the Tm halide to the total mass M of the metal halide being within a range of about $0.4 \leq MTm/M \leq 0.9$ —e.g., if halides of Na (NaI), Tl (TlI), In (InI), and Tm (TmI₂) are the only halides selected from Table 1 of Hansler and using their atomic weights, MTm is 422.743 and M is 1145.647, which would make MTm/M equal to 0.367, which is *about* 0.4.

8. Regarding independent claim 7, Figure 4 of Hansler shows a discharge lamp including an arc tube (46), the arc tube comprising a discharge chamber having a pair of end sections; a pair of feedthroughs (38, 40), each of the feedthroughs being hermetically sealed within one of the end sections of the discharge chamber, respectively; and a pair of electrodes (30, 32), each of the electrodes being connected to one of the feedthroughs, wherein the discharge chamber is filled with a discharge medium including a metal halide that comprises at least halides of Na, Tl, In, and Tm (col. 5, Table 1) and a starting gas (col. 5, ln. 38-39), and wherein the ratio $(MTm + MTl + MIn)/M$ of the sum of the mass MTm of the Tm halide and the mass MTl of the Tl halide and the mass MIn of the In halide to the total mass M of the metal halide is within a range of about $0.61 \leq (MTm + MTl + MIn)/M \leq 0.9$, and wherein the ratio

M_{In}/M of the mass of In halide to the total mass M of the metal halide is within a range of about $0.01 \leq M_{In}/M \leq 0.1$ — e.g., if halides of Na (NaI), Tl (TlI₃), In (InI), and Tm (TmI₃) are the only halides selected from Table 1 of Hansler and using their atomic weights, $MTm + MTl + M_{In}$ is 1376.467 and M is 1526.361, which would make $(MTm + MTl + M_{In})/M$ equal to 0.902, which is *about* 0.9 and would also make M_{In}/M equal to 0.158, which is *about* 0.1.

9. Regarding claim 8, Hansler discloses the ratio $(MTm + MTl + M_{In})/M$ of the sum of the mass MTm of the Tm halide and the mass MTl of the Tl halide and the mass M_{In} of the In halide to the total mass M of the metal halide is within a range of about $0.61 \leq (MTm + MTl + M_{In})/M \leq 0.9$, and wherein the ratio M_{In}/M of the mass of In halide to the total mass M of the metal halide is within a range of about $0.01 \leq M_{In}/M \leq 0.1$ — e.g., if halides of Na (NaI), Tl (TlI₃), In (InI), and Tm (TmI₃) are the only halides selected from Table 1 of Hansler and using their atomic weights, $MTm + MTl + M_{In}$ is 1376.467 and M is 1526.361, which would make $(MTm + MTl + M_{In})/M$ equal to 0.902, which is *about* 0.9 and would also make M_{In}/M equal to 0.158, which is *about* 0.1.

10. Regarding claim 9, Hansler discloses the metal halide further comprising at least one metal halide selected from the group of metals consisting of Ce, Pr, Ca, Cs, Li, Mg, and Rb (col. 5, Table 1).

11. Regarding claim 10, the Examiner notes that expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim (MPEP § 2115). Thus, the claimed properties of the

light emitted by the lamp have not been given patentable weight, since they do not add any structural limitation to the claim.

12. Regarding claim 11, the Examiner notes that expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim (MPEP § 2115). Thus, the claimed properties of the light emitted by the lamp have not been given patentable weight, since they do not add any structural limitation to the claim.

13. Regarding claim 12, Figure 4 of Hansler shows an outer jacket (48) hermetically enclosing the arc tube, and a pair of feeder members (42, 44), which are configured to support and position the arc tube relative to the outer jacket, wherein the pair of feeder members is sealed within an area of the outer jacket and is electrically connected to the feedthroughs.

14. Regarding claim 14, Hansler discloses a lighting circuit configured to supply a voltage to the lamp (col. 8, ln. 55-65). The Examiner notes that expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim (MPEP § 2115). Thus, the lamp voltage properties when the lamp is lit have not been given patentable weight, since they do not add any structural limitation to the claim.

15. Regarding claim 15, Hansler discloses a lighting circuit configured to supply a voltage to the lamp (col. 8, ln. 55-65). The Examiner notes that expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim (MPEP § 2115). Thus, the lighting

circuit having a dimming operation has not been given patentable weight, since it does not add any structural limitation to the claim.

16. Regarding claim 16, Figure 4 of Hansler shows the end sections being tubular sections with constant diameters.

17. Regarding claim 17, Figure 4 of Hansler shows the central section provided with a given diameter.

18. Regarding claim 18, Figure 4 of Hansler shows the internal diameter of the central section greater than the internal diameter of the end sections.

19. Regarding claim 19, Figure 4 of Hansler shows the central section being bulgy or ramp-like with increasing diameter including a most extended diameter.

20. Regarding claim 20, Figure 4 of Hansler shows an outer jacket (48) hermetically enclosing the arc tube.

21. Regarding claim 21, Figure 4 of Hansler shows a pair of feeder members (42, 44) configured to support and position the arc tube within an end of the outer jacket, the feeder member being sealed within an end of the outer jacket and electrically connected to the feedthroughs.

Claim Rejections - 35 USC § 103

22. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

23. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansler (US 4,935,668) in view of Kobayashi (US 4,503,356).

24. Regarding independent claim 1, Figure 4 of Hansler shows a discharge lamp including an arc tube (46), the arc tube a discharge chamber that defines a discharge volume, the chamber having a pair of end sections provided at both ends of a central section; a pair of feedthroughs (38, 40), each of the feedthroughs being hermetically sealed within one of the end sections, respectively; and a pair of electrodes (30, 32), each of the electrodes comprising a tip that extends towards the central section and is connected to one of the feedthroughs, wherein the discharge chamber is filled with a discharge medium including a metal halide and a starting gas, the metal halide comprising at least halides of Na, Tl, and Tm (col. 5, Table 1), and wherein the ratio of the mass MTm of Tm halide to the total mass M of the metal halide is within a range of about $0.4 \leq MTm/M \leq 0.9$ —if halides of Na, Tl, and Tm are the only halides selected from Table 1 of Hansler and using their atomic weights, MTm is 422.743 and M is 903.925, which would make MTm/M equal to 0.468, which falls within range above.

25. Hansler teaches the limitations of independent claim 1 discussed above but fails to exemplify the discharge chamber being made of a translucent ceramic.

26. Kobayashi teaches that it is known in the art to provide discharge lamps with arc tubes comprising a translucent ceramic discharge chamber for withstanding vapors of metal halides, thereby improving the luminous efficiency of the device (col. 1, ln. 20-25).

27. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the arc tube of Hansler with a translucent

ceramic discharge chamber, as taught by Kobayashi, for improving the luminous efficiency of the lamp.

28. Regarding claim 3, Hansler discloses the total mass of the halides of Na, Tl, and Tm being greater than 90% by weight of the total mass M of the metal halide, since if halides of Na, Tl, and Tm are the only halides selected from Table 1 of Hansler, the total mass of the halides would be 100% of the total mass of the metal halide, which is greater than 90% of the total mass.

29. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hansler (US 4,935,668) in view of Higashi (US 4,024,425).

30. Regarding claim 13, Hansler teaches each of the limitations of independent claim 4, as discussed earlier, but fails to exemplify an inner shroud disposed within the outer jacket and surrounding the arc tube, the shroud being made of glass.

31. Figure 1 of Higashi shows a discharge lamp including an outer jacket (1), which hermetically encloses the arc tube (2) and an inner shroud disposed within the outer jacket (1) and surrounding the arc tube, the shroud being made of glass (col. 2, ln. 5).

32. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the discharge lamp of Hansler with an inner shroud disposed within the outer jacket, as taught by Higashi, for supporting the arc tube.

Response to Arguments

33. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Quarterman whose telephone number is (571) 272-2461. The examiner can normally be reached on M-TH (7-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
